Integra Series

Discover the Next Generation of Professional Audio Solutions

Integra 16S

The new Integra 16S is a DSP matrix that retains all the features of the well-known Integra 8S but with double the channels: 16 inputs and 16 outputs. This model offers greater audio management capacity, ideal for more complex installations that require simultaneous control of multiple zones or areas. With its per-channel configurable DSP, the Integra 16S allows precise sound optimization, ensuring exceptional quality in medium to large installation environments.

**Work Pro DSP Software Compatible*

Serial and GPIO features

Integra 4S A

The Integra 4SA is a matrix with 4 inputs and 4 outputs, featuring a 4-channel amplifier with 150W per channel. This combination is perfect for applications where a simplified installation and reduced size are required without sacrificing performance and flexibility.

**Work Pro DSP Software Compatible*

Integra 8S A

Integra 8SA offers an 8-input and 8-output matrix along with an 8-channel amplifier, each with 150W of power. These models not only manage audio but also provide amplification, significantly reducing complexity and installation time—something highly valued by integrators and sound technicians.

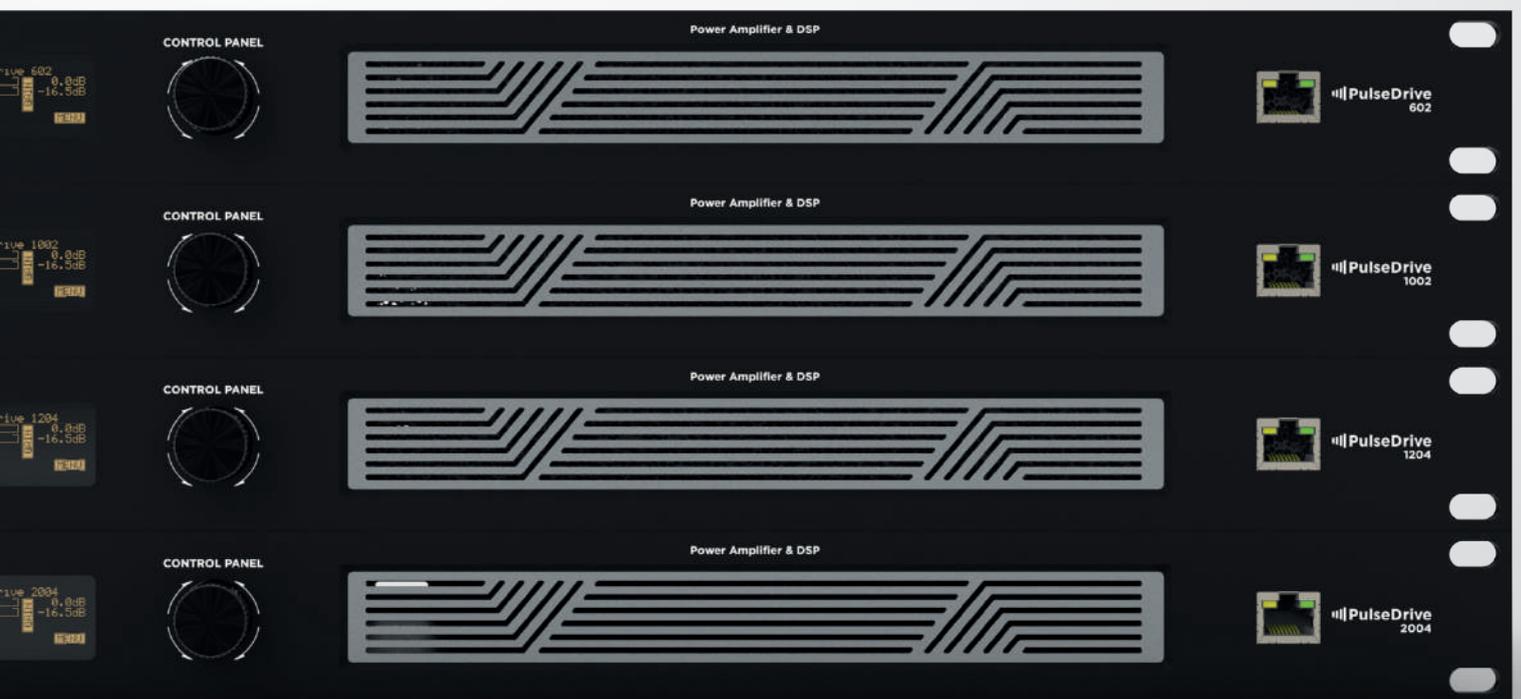

**Work Pro DSP Software Compatible*

Expand your audio control

The WAC 4 and WAC 8 panels are two advanced control panels powered by PoE (Power over Ethernet), each equipped with a 4-inch and 8-inch touchscreen respectively, running Android 11.

The WCiR is a control panel with a small OLED screen and a push-button encoder, redesigned to update its look and feel and improve the user experience compared to the previous version. This panel is ideal for installations requiring a simple, compact control with a clear visual interface. The WCi8 is a panel featuring 8 configurable physical buttons and an encoder with a push-button, offering a practical and robust solution for audio system control, allowing users to configure and customize functions according to the specific needs of each installation.

PulseDrive Series

Compact Power, Precision Control, Ultimate Performance

Compact Power, Precision Sound

The PulseDrive Series consists of 4 high-performance models that offer powerful amplification in a compact, easy-to-carry format. With switch mode power supplies, these amplifiers provide high efficiency while significantly reducing weight and size, making them ideal for portable sound reinforcement systems. Both models feature advanced digital signal processing (DSP), allowing users to precisely adjust parameters such as EQ, delay, and compression for optimal sound in any environment.

Work Pro DSP Software

DSP Power Amplifier

Multi-device software

Smart Control, Ultimate Flexibility

Each amplifier is equipped with an intuitive OLED display and an encoder for easy navigation of the DSP settings. Additionally, the PulseDrive amplifiers feature LAN connectivity for remote control and monitoring through PC software, making them an excellent choice for both live performances and permanent installations where ease of use and flexibility are crucial.

Versatile Power, Unmatched Reliability

The PulseDrive A504-DSP is a 4-channel amplifier that delivers 500W per channel at 4 ohms, providing ample power for a wide range of speaker configurations. The unit also supports bridge mono operation, delivering 1000W x 2ch for subwoofer applications, making it a versatile tool for different audio setups. With a robust protection system that includes thermal, short-circuit, and power-on/off muting safeguards, the PulseDrive Series ensures reliability even in demanding conditions.

Full DSP Configuration

MINO E2 Series

Exceptional Sound, Endless Installation Possibilities

Versatile Sound for Every Space

The revamped Mino series includes the well-known Mino 6 and Mino 8 models with renewed sound, and now welcomes two new additions: the compact Mino 5CX E2, featuring a coaxial 5-inch driver, and the larger Mino 10 E2, equipped with a 10-inch driver for greater performance. These new models expand the range's capabilities, making it suitable for a broader range of applications—from small-scale installations to larger venues requiring increased coverage and audio power.

2 More models

Improved rigging possibilities

Elegance, Versatility, and Simplified Installation

The Mino E2 loudspeakers have been specifically designed for installation purposes, and as part of their renewal, the cabinets have been upgraded with multiple mounting points, giving installers more options when deciding how to install the speakers. This versatility ensures optimal installation in any type of environment, offering an elegant design that adapts to diverse mounting needs. Additionally, the speakers now feature both terminal and PowerCon connections, providing a professional solution that simplifies installation and power management.

Timeless Black and White to Fit Any Space

All models are available in black and white finishes, ensuring they blend seamlessly into any environment, whether it's a commercial space, corporate setting, or entertainment venue.

Raptor Series

Big Sound, Quick Setup, Total Portability

Compact Power with Seamless Integration

The new Raptor series consists of compact systems that combine an amplified subwoofer and a satellite speaker. The Raptor 8 includes a 2x8-inch subwoofer and a passive satellite, while the Raptor 10 features a 2x10-inch subwoofer and an active satellite. Both models have a dual 5-inch satellite speaker plus tweeter, mounted on a speaker stand coming from the subwoofer, creating an easy-to-install system optimized for the best performance.

15mm Plywood

BT/TWS

Portable Power, Instant Setup

Designed for small events where portability is key, the Raptor systems stand out for their ease of transport and quick setup without compromising sound quality. One of the main innovations of the Raptor 8 is its quick connection system, where the speaker stand includes the satellite audio connection, allowing ultra-fast installation without the need for additional cables. This makes the Raptor 8 ideal for events where minimizing time and effort is crucial.

Hidden cable feature

Active D DSP Amplifier

Active D DSP Amplifier

Double 5" + 1" Tweeter

Big Impact for Events of Any Size

The Raptor 10, with an RMS power of 800W for the subwoofer and 300W for the satellite, provides a powerful solution for small events that require a big sound impact. On the other hand, the Raptor 8, with an RMS power of 500W+500W, is perfect for medium-sized events that require high quality and easy setup.

Raitone System

Innovative sound integration for retail environments

Portable Power, Instant Setup

At the heart of the Railtone system are the RL-5A speakers, which boast a sleek design resembling traditional lighting fixtures. These 5-inch amplified speakers mount directly onto lighting tracks commonly used in retail stores, using the track's existing power supply to operate. This innovative approach eliminates the need for additional wiring or power sources, making installation remarkably straightforward.

Each RL-5A speaker is equipped with:

- 18W Amplifier with volume control and independent bass and treble adjustment knobs, allowing precise tuning for optimal audio performance.
- A wireless audio receiver operating on a 2.4 GHz network, enabling the system to deliver crystal-clear sound without the constraints of physical audio connections.
- Directional addressing, which assigns each speaker a unique channel, enabling up to 16 different playback channels to be managed simultaneously within a single installation.

Up to 16 different channels for speakers groups.

Multiroom and control allowed via app.

Your All-in-One Hub for Wireless Audio Streaming

The system is complemented by the RL-Player, a versatile wireless audio player that serves as the hub for streaming and managing audio content. The RL-Player offers multiple connectivity options, including:

- Internet streaming compatibility with popular music platforms.
- A USB port for local playback of stored audio files.
- Internet radio for a wide range of streaming options.
- An auxiliary RCA input for integrating external audio sources.
- Bluetooth receiver to connect a external device as a source player via Bluetooth

Perfect Harmony for Scalable Commercial Audio

The system also supports seamless synchronization across multiple speakers, ensuring a consistent and immersive audio experience throughout the installation

Together, the RL-5A and RL-Player, with its ability to handle multiple zones independently or simultaneously, Railtone redefines audio management for retail and commercial spaces, create a sophisticated and scalable audio solution ideal for retail environments, cafes, and any commercial setting that demands both aesthetic integration and superior sound quality.

NEO Air

Wireless Audio Redefined for Any Space

Reinforcing our Wireless Audio Solutions with a Renewed Neo AIR System

The NEO Air system redefines simplicity and performance in wireless audio, combining the exceptional sound quality and compact design that the NEO range is known for, with an advanced built-in wireless digital audio transceiver. This feature transforms NEO Air speakers into a seamless broadcast system where any unit can function as a master or receiver. In multi-speaker installations, one speaker can act as the master to distribute audio to an unlimited number of receivers, creating synchronized and immersive audio environments.

Key Advantages of the NEO Air System

- **Flexible Connectivity:** The NEO Air master speaker supports both Bluetooth and wired line-in connections, allowing users to stream audio effortlessly from smartphones, computers, or other devices.
- **Unlimited Receivers:** The master speaker can broadcast audio to an unlimited number of NEO Air receiver units, ensuring consistent and high-quality sound across any space.
- **Multi-Channel Options:** With dip switch-controlled channel selectors, up to 16 independent audio channels can be assigned, enabling venues to deliver distinct audio ambiances across multiple zones.
- **Indoor and Outdoor Applications:** Designed for both indoor and outdoor use, NEO Air speakers are robust enough to withstand wind, rain, and adverse weather conditions, making them ideal for diverse installation scenarios.

Enhanced Features for European Markets

The NEO Air range offers additional features tailored for European installers and venue owners, including support for low impedance installations and 100V line installations. Furthermore, the speakers can be mounted on specially designed brackets, enabling precise adjustment in both axes to optimize audio coverage.

Arion 208

Power and versatility in an amplified Line Array system

Power and Precision for Every Audience

The ARION 208 system is designed to meet the needs of both professional users and those with less experience in advanced audio systems. With an optimized design and premium components, this system ensures exceptional sound quality, adapting to various applications, from live events to fixed installations.

This system comprises the SL208A satellites, equipped with dual 8-inch speakers and a compression driver, and the SL118SA subwoofer, featuring a powerful 18-inch speaker, with all transducers in both satellites and subwoofers manufactured by Celestion. Together, they form an all-in-one solution that combines power, quality, and ease of use.

Precision Sound with Powerful Performance

SL208A (Satellite): This active two-way speaker integrates two 8-inch speakers and a 1-inch Celestion Neodymium compression driver mounted in an 18mm birch plywood enclosure, ensuring durability and acoustic quality. With a three-point suspension system, it enables quick and secure setup. Additionally, it incorporates a specially designed waveguide that optimizes sound dispersion, guaranteeing uniform coverage and exceptional acoustic quality. The DSP amplification ensures top performance in any environment, with each satellite delivering 1600W of power.

Ground-Shaking Bass with Unmatched Precision

SL118SA (Subwoofer): Featuring an 18-inch Celestion speaker, this subwoofer provides a solid and powerful foundation for the system. Its high-power Class D amplifier (up to 3000W) and integrated DSP processing ensure precise control of low frequencies, delivering spectacular performance even in demanding setups.

CVA Series

Powerful Sound, Endless Possibilities

Precision Sound for Every Setting

This series features two line array column speakers, each equipped with dual 5-inch woofers and dual 3/4-inch compression drivers paired with line horns. Delivering 250W RMS and 500W program at 8Ω, these speakers provide clear and powerful audio, making them perfect for a wide range of applications. The CVA Series offers flexible options for both permanent installations and portable PA systems.

Dual 3/4" compression drivers with linear horns

5" woofers

12mm birch plywood

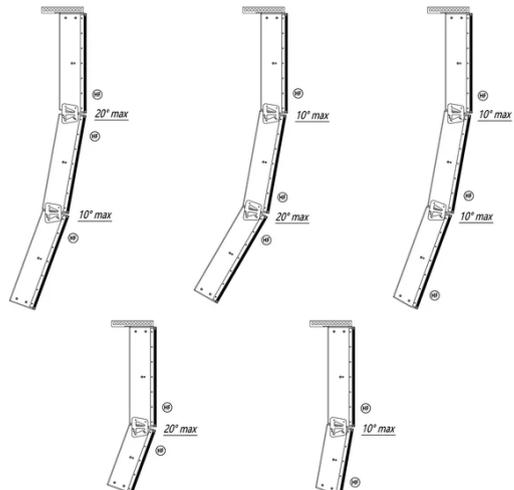

35mm socket

Compact Design, Uncompromising Performance

With a compact and lightweight design, this product range is engineered to deliver exceptional sound performance without compromising durability. Constructed from birch plywood and finished with a sleek textured black paint, the cabinet combines robust protection with an elegant appearance. Featuring two Speakon input connectors, these speakers are compatible with virtually any sound system. The CVA Series is an excellent choice for live events, houses of worship, conference halls, auditoriums, restaurants, and beyond.

Versatile Mounting, Limitless Flexibility

Each CVA model comes with two U-brackets and adapters that allow for 10° directional tilts, along with an extension bracket for combining two column speakers into a single array. Additionally, a 35mm socket on the base of each speaker facilitates easy setup on standard speaker poles or tripods. For more advanced mounting needs, optional accessories include the wall mount, which offers precise angle adjustments, and the flying frame for suspension setups, both sold separately.
